

The Water Table designed by Robert Siegel is the modern version of the massive stone table that resides in the gardens of the Villa Lante in Bagnaia, Italy. Available in several sizes this modular entertaining table is handcrafted to a luxurious finish using extremeconcrete® and is supported and accented by stainless steel. An integral concrete trough running down the center of the table can be filled with ice or water while a perforated stainless steel screen slides over the channel transforming the table top into a continuous flat dining surface.
